

Technical Bulletin: Driver's Weight

RE: Driver's weight as per Rule 6.1.2 and 4.6.3

Drivers must submit to being weighed as per Rule 6.1.2: “... *fully clothed, as if dressed for competition, together with a helmet*” as part of the technical inspection under Rule 4.6.3.

Competitors will be weighed using an OTA supplied scale and tolerances for actual versus declared drivers' weights shall allow up to seven (7 lbs) **negative** tolerance. I.e: If your actual driver's weight is less than your declared weight by 7lbs, you are within the allowable tolerance and thus compliant with your declared weight.

The resulting weight must correspond (within allowable tolerance) to the driver weight used to classify the car and declared on the PIP schedule.

No penalty shall be issued for **positive** tolerance versus declared. I.e: If your actual driver's weight is more than your declared weight by any amount.
